

Final Examination 2021

# NSW Year 11 Mathematics Standard

Solutions and marking guidelines

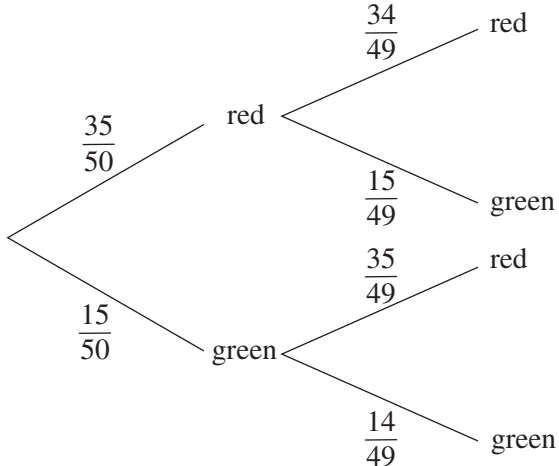

Answer and explanation	Syllabus content, outcomes and targeted performance bands
<p><b>Question 9</b>      <b>C</b></p> <p>Hugh and Louis must earn the same amount. This is represented by the following expression.</p> $300 + 0.035 \times \underline{\quad} = 0.05 \times \underline{\quad}$ <p>Let <math>x</math> be the value of sales.</p> <p>Solving for <math>x</math> gives:</p> $300 + 0.035x = 0.05x$ $300 = 0.05x - 0.035x$ $300 = 0.015x$ $x = \frac{300}{0.015}$ $= \$20\,000$ <p>Hence, Hugh and Louis must each make \$20 000 worth of sales to earn the same amount (\$1000).</p> <p>Alternatively, the solution can be obtained by substituting each option into the expression.</p> <p><b>C</b> is correct.</p> $300 + 0.035 \times 20\,000 = 0.05 \times 20\,000$ $1000 = 1000$ <p><b>A</b> is incorrect. <math>300 + 0.035 \times 5000 \neq 0.05 \times 5000</math></p> <p><b>B</b> is incorrect. <math>300 + 0.035 \times 10\,000 \neq 0.05 \times 10\,000</math></p> <p><b>D</b> is incorrect. <math>300 + 0.035 \times 30\,000 \neq 0.05 \times 30\,000</math></p>	<p>MS–F1 Money Matters MS11–5                      Bands 3–4</p>
<p><b>Question 10</b>      <b>D</b></p> <p>The rate and <math>n</math> must be expressed in the same units.</p> <ul style="list-style-type: none"> <li>• four years = 48 months</li> <li>• 0.5% = 0.005</li> </ul> $I = Prn$ $= 9000 \times 0.005 \times 48$	<p>MS–F1 Money Matters MS11–5                      Bands 3–4</p>
<p><b>Question 11</b>      <b>C</b></p> <p>capacity = <math>76.5 \times 1000</math></p> $= 76\,500 \text{ cm}^3$ $V = 85 \times 45 \times h$ $76\,500 = 85 \times 45 \times h$ $h = \frac{76\,500}{3825}$ $= 20 \text{ cm}$	<p>MS–M1 Applications of Measurement MS11–4                      Bands 4–5</p>

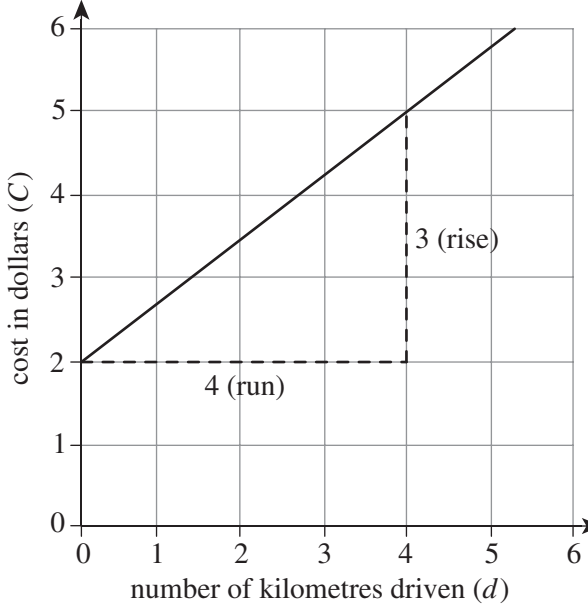

Answer and explanation	Syllabus content, outcomes and targeted performance bands																																			
<p><b>Question 12</b>      <b>A</b></p> <p>The Johnsonia High School box-plot represents 200 students. Half of those students (two quartiles) spent 20–30 hours learning to drive with instructors. This means 100 students from Johnsonia High School had 20–30 hours of driving lessons. Therefore, 100 students from Flowerdale High School are represented per quartile as both schools had the same number of students spend between 20–30 hours learning to drive. Hence, the Flowerdale High School box-plot represents 400 students (<math>100 \times 4 = 400</math>).</p> <p>The total number of students represented by both box-plots is given by <math>400 + 200 = 600</math>.</p>	<p>MS–S1 Data Analysis MS11–10                      Bands 5–6</p>																																			
<p><b>Question 13</b>      <b>A</b></p> <ul style="list-style-type: none"> <li>• precision = 10 cm</li> <li>• absolute error = 5 cm (half the precision)</li> <li>• measurement = 21 240 cm</li> </ul> <p>percentage error = <math>\frac{\text{absolute error}}{\text{measurement}} \times 100\%</math></p> $= \frac{5}{21240} \times 100$ $= 0.02354\dots$ $\approx 0.024\%$	<p>MS–M1 Applications of Measurement MS11–3                      Bands 4–5</p>																																			
<p><b>Question 14</b>      <b>C</b></p> <p>The sample space is shown in the table.</p> <table border="1" data-bbox="180 1245 906 1469"> <thead> <tr> <th></th> <th>1</th> <th>2</th> <th>3</th> <th>4</th> <th>5</th> <th>6</th> </tr> </thead> <tbody> <tr> <th>1</th> <td><b>1, 1</b></td> <td><b>1, 2</b></td> <td><b>1, 3</b></td> <td><b>1, 4</b></td> <td><b>1, 5</b></td> <td><b>1, 6</b></td> </tr> <tr> <th>2</th> <td><b>2, 1</b></td> <td>2, 2</td> <td>2, 3</td> <td>2, 4</td> <td>2, 5</td> <td>2, 6</td> </tr> <tr> <th>3</th> <td><b>3, 1</b></td> <td>3, 2</td> <td>3, 3</td> <td>3, 4</td> <td>3, 5</td> <td>3, 6</td> </tr> <tr> <th>4</th> <td><b>4, 1</b></td> <td>4, 2</td> <td>4, 3</td> <td>4, 4</td> <td>4, 5</td> <td>4, 6</td> </tr> </tbody> </table> <p>The outcomes in bold meet the criteria of at least either the die or the marble showing the number 1. <p><b>Question 31</b></p> <p>(a) 35 kilojoules per kilogram <math>\times</math> 53 kilograms = 1855 kilojoules per hour</p> <p>40 minutes = <math>\frac{2}{3}</math> hour</p> <p><math>1855 \times \frac{2}{3} = 1236\frac{2}{3}</math> kilojoules</p> <p>Karla did not burn off the energy contained in the serving of chips.</p>	<p>MS–M1 Applications of Measurement MS11–3, MS11–10 Bands 5–6</p> <ul style="list-style-type: none"> <li>• Gives the correct solution . . . . .2</li> </ul> <hr/> <ul style="list-style-type: none"> <li>• Makes significant progress . . . . .1</li> </ul>											
<p>(b) 1290 kilojoules = 15% of the daily adult intake</p> <p>100% of daily adult intake = <math>\left(\frac{1290}{15}\right) \times 100</math> = 8600 kJ</p> <p>100% average adult intake in kilocalories</p> <p style="text-align: center;"><math>= \frac{8600}{4.184}</math> = 2055.449 <math>\approx</math> 2055 kilocalories</p>	<p>MS–M1 Applications of Measurement MS11–3, MS11–10 Bands 5–6</p> <ul style="list-style-type: none"> <li>• Gives the correct solution . . . . .2</li> </ul> <hr/> <ul style="list-style-type: none"> <li>• Makes significant progress . . . . .1</li> </ul>											

Sample answer	Syllabus content, outcomes, targeted performance bands and marking guide																
<b>Question 32</b>																	
<p>(a) total number of respondents = <math>60 + 40 + 40 + 20 + 10</math>  <math>= 170</math></p> <p>percentage of respondents = <math>\frac{20}{170} \times 100</math>  <math>= 11.7647 \dots</math>  <math>\approx 11.76\%</math></p>	<p>MS–S1 Data Analysis                      MS11–7 Bands 4–5</p> <ul style="list-style-type: none"> <li>• Gives the correct solution . . . . . 1</li> </ul>																
<p>(b) Taking the sum of all the categories to point X gives:  <math>60 + 40 + 40 = 140</math></p> <p><math>\frac{140}{170} \times 100 = 82.3529 \dots</math>  <math>\approx 82.35\%</math></p>	<p>MS–S1 Data Analysis                      MS11–7 Bands 5–6</p> <ul style="list-style-type: none"> <li>• Gives the correct solution . . . . . 2</li> </ul> <hr/> <ul style="list-style-type: none"> <li>• Calculates the sum of the three most common responses . . . . . 1</li> </ul>																
<p>(c) The line graph represents cumulative frequency. Since the increase from point V to point W is 40 people, and the increase between point W and point X is 40 people, the line segment from point V to point X is a straight line due to the constant rate of change.</p>	<p>MS–S1 Data Analysis                      MS11–10 Bands 5–6</p> <ul style="list-style-type: none"> <li>• Gives the correct explanation . . . . . 1</li> </ul>																
<b>Question 33</b>																	
<p><math>\frac{3.6\% \text{ per annum}}{4} = 0.9\% \text{ per quarter}</math></p> <table border="1" style="width: 100%; border-collapse: collapse; text-align: center;"> <thead> <tr> <th style="text-align: left;">Quarter</th> <th style="text-align: left;">Principle</th> <th style="text-align: left;">Interest</th> <th style="text-align: left;">Principal + interest</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>\$4000</td> <td><math>0.9\% \times 4000 = \\$36</math></td> <td>\$4036.00</td> </tr> <tr> <td>2</td> <td>\$4036</td> <td><math>0.9\% \times 4036 = \\$36.32</math></td> <td>\$4072.32</td> </tr> <tr> <td>3</td> <td>\$4072.32</td> <td>?</td> <td>\$4113.04</td> </tr> </tbody> </table> <p>The question asks for the new annual interest rate that was offered to Kayla in the third quarter.</p> <p>interest in third quarter = <math>4113.04 - 4072.32</math>  <math>= \\$40.72</math></p> <p><math>40.72 = \text{interest rate per quarter} \times 4072.32</math></p> <p>interest rate per quarter = <math>\frac{40.72}{4072.32}</math>  <math>= 0.0099 \dots \%</math></p> <p><math>\frac{40.72}{4072.32} \times 100 \times 4 = 3.9996 \dots</math>  <math>\approx 4\% \text{ per annum}</math></p>	Quarter	Principle	Interest	Principal + interest	1	\$4000	$0.9\% \times 4000 = \$36$	\$4036.00	2	\$4036	$0.9\% \times 4036 = \$36.32$	\$4072.32	3	\$4072.32	?	\$4113.04	<p>MS–F1 Money Matters                      MS11–2, MS11–5, MS11–10 Bands 5–6</p> <ul style="list-style-type: none"> <li>• Gives the correct solution . . . . . 4</li> </ul> <hr/> <ul style="list-style-type: none"> <li>• Makes significant progress . . . . . 3</li> </ul> <hr/> <ul style="list-style-type: none"> <li>• Completes TWO calculations correctly . . . . . 2</li> </ul> <hr/> <ul style="list-style-type: none"> <li>• Calculates interest of one quarter correctly . . . . . 1</li> </ul>
Quarter	Principle	Interest	Principal + interest														
1	\$4000	$0.9\% \times 4000 = \$36$	\$4036.00														
2	\$4036	$0.9\% \times 4036 = \$36.32$	\$4072.32														
3	\$4072.32	?	\$4113.04
