	https://www.youtube.com/watch?v=WwmJ5nMmigQ and write down your
Work required in	personal 5 key points
preparation for start of 2020:	Activity 2: Complete the motion exam questions attached
	Activity 3: Attempt diagnostic test on fields according to the instructions
Textbooks and	Checkpoints Physics 3&4
other resources:	Scientific Calculator
	https://www.vcaa.vic.edu.au/Pages/vce/studies/physics/exams.aspx
Key Links:	https://www.vcaa.vic.edu.au/Documents/vce/physics/PhysicsSD-2016.pdf
Due date:	Friday 7 th of February 2020

Activity 1

Watch the video <u>https://www.youtube.com/watch?v=WwmJ5nMmigQ</u> and write down your 5 key points in the space below.

Point 1

Point 2

Point 3

Point 4

Point 5

Activity 2

<

<u>с I I т</u>

NOT WDITE IN

Use your understanding/ notes from Year 11 to answer the following questions from previous exams.

	$4.0 \text{ kg} \qquad 8.0 \text{ m s}^{-1} \qquad B$	
	Figure 1	
a. C	Calculate the speed of block B after the collision.	2 marks
_		
_		
	$m s^{-1}$	
b. E	Explain whether the collision is elastic or inelastic. Include some calculations in your answer.	2 marks

A metal ring is to be held stationary by three forces that are all pulling on the ring. All the forces are greater than zero, but their magnitudes are not given. Possible directions of the forces on the ring are shown in the arrangements in Figure 5. Only one of these arrangements can hold the ring stationary.

Identify which one of the arrangements (A.–D.) shown in Figure 5 could hold the metal ring stationary and explain the reasons for your answer.

the second se	

Figure 1

A tractor, including the driver, has a mass of 500 kg and is towing a trailer of mass 2000 kg as shown in Figure 1. The tractor and trailer are accelerating at 0.50 m s^{-2} .

Ignore any retarding friction forces. Ignore the mass of the towing rope.

The tractor and trailer start from rest.

How far does the tractor move in the first 5.0 s?

2 marks

3

Fred is riding his sled on snow. Fred and the sled have a total mass of 60 kg. He travels downhill from A to B. The sled starts from rest.

A is a vertical height of 12.8 m above B. At B he then travels along a horizontal snowfield to point C. From A to C (on snow) there is no friction force.

At point C he runs off snow onto grass where there is now a (constant) friction force and he slows to a stop at D after a time of 6.0 s.

	What is the magnitude of the friction force as he travels from point C to point D?

Four students are pulling on ropes in a four-person tug of war. The relative sizes of the forces acting on the various ropes are $F_W = 200 \text{ N}$, $F_X = 240 \text{ N}$, $F_Y = 180 \text{ N}$ and $F_Z = 210 \text{ N}$. The situation is shown in the diagram below.

Which one of the following **best** gives the magnitude of the resultant force acting at the centre of the tug-of-war ropes?

- **A.** 28.3 N
- **B.** 30.0 N
- **C.** 36.1 N
- **D.** 50.0 N

Activity 3

Instructions

Complete the following two diagnostic tests on fields. Start by answering all that you can with just your formula sheet and calculator. Then research the questions you could not answer on the internet and answer them <u>using a different coloured pen.</u>

PHYSICS VCE UNITS 3&4 DIAGNOSTIC TOPIC TESTS 2017

TEST 1: HOW DO THINGS MOVE WITHOUT CONTACT? (I)

TOTAL 45 MARKS (45 MINUTES)

Student's Name: _____

Teacher's Name: _____

Directions to students

Write your name and your teacher's name in the spaces provided above. Answer all questions in the spaces provided.

Use $k = 9.0 \times 10^9$ N m² C⁻², $q_e = 1.6 \times 10^{-19}$ C and $m_e = 9.11 \times 10^{-31}$ kg.

Neap Diagnostic Topic Tests (DTTs) are licensed to be photocopied and used only within the confines of the school purchasing them, for the purpose of examining that school's students only. They may not be placed on the school intranet or otherwise reproduced or distributed. The copyright of Neap DTTs remains with Neap. Question 1 (8 marks)

Draw eight electric field lines between each of the charged points or planes.

Question 2 (12 marks)

Draw eight magnetic field lines for each of the diagrams below. Arrows in wires show the direction of the positive current.

Question 3 (4 marks)

Figure 1 shows the electric field around a point charge. A dashed line AB is shown cutting across the electric field.

Figure 1

Complete the following sentences by circling the correct option from the choice of three that is given within each set of brackets.

a.	As an electric field probe is passed from A to B along the line AB, the electric field direction is zero / static / changing and the magnitude of the electric	
	field is zero / static / changing.	2 marks
b.	As an electric field probe is passed from the centre radially outwards, the electric field direction is constant / changing and the magnitude of the electric field	2 marks
	is zero / constant / increasing / decreasing.	2 marks
Ques	tion 4 (4 marks)	
Two	electrons are a distance of 1.0×10^{-10} m apart.	

a. Determine the electric field strength at the position of one electron due to the other. 2 marks

b. Determine the magnitude of the electric force between the electrons. 2 marks

Question 5 (6 marks)

The potential difference between two plates of distance 2.0 cm is 12.0 V.

a. Determine the electric field strength between the two plates. 2 marks

 $N C^{-1}$

b. Determine the electric force acting on an electron passing in the region of the electric field.

2 marks

c. Determine the work done on an electron if it travels from the negative plate to the positive plate.

2 marks

J

Question 6 (11 marks)

An electron is fired into a region of magnetic field, as shown in Figure 2.

Figure 2

a.	Sketch the path of the electron through the magnetic field in Figure 2 and identify the direction of the force at any point chosen by you along the path you sketch.	2 marks
b.	If the electron travels at 2.0×10^6 m s ⁻¹ and the magnitude of the magnetic field is 0.50 T, determine the size of the force acting on the electron.	2 marks

Ν

c. Determine the radius of the path followed by the electron.

3 marks

111

d. Explain how the answers to parts **a.**, **b.** and **c.** would vary if the electron had been fired parallel with one of the magnetic field lines in Figure 2.

PHYSICS VCE UNITS 3&4 DIAGNOSTIC TOPIC TESTS 2017

TEST 2: HOW DO THINGS MOVE WITHOUT CONTACT? (II)

TOTAL 45 MARKS (45 MINUTES)

Student's Name: _____

Teacher's Name: _____

Directions to students

Write your name and your teacher's name in the spaces provided above. Answer all questions in the spaces provided.

Neap Diagnostic Topic Tests (DTTs) are licensed to be photocopied and used only within the confines of the school purchasing them, for the purpose of examining that school's students only. They may not be placed on the school intranet or otherwise reproduced or distributed. The copyright of Neap DTTs remains with Neap. Question 1 (11 marks)

For this question

- mass of the Earth = 5.98×10^{24} kg •
- mass of the International Space Station = 4.20×10^5 kg •
- Universal Gravitational Constant = 6.67×10^{-11} SI units •
- radius of the Earth = 6.38×10^6 m. •

The International Space Station is in a circular orbit at an altitude of 400 km above the surface of the Earth.

Determine the radius of the orbit of the International Space Station. a.

	m	

b. Determine the gravitational field strength of the Earth at the position of the International Space Station in its orbit. 2 marks

1 mark

 $N kg^{-1}$

c. Determine the weight of the International Space Station at its position in orbit about the Earth.

2 marks

Ν

d. Determine the period of the International Space Station in its orbit in minutes.

3 marks

min

e. Astronauts in the International Space Station float as they live and work. They experience weightlessness during their time in the craft.

Explain why they are weightless during this time. In your answer make reference to the terms **weight** and **normal reaction**.

Question 2 (8 marks)

Figure 1 shows two coils of uniformly wound wire. Both coils have the same positive DC current passing through them. Point A is a point midway between the two coils.

Question 3 (4 marks)

Two negative charges, -Q and -2Q, are distances *r* and 2r from point X, as shown in Figure 2.

Figure 2

a. Show the direction of the resultant electric field at point X.

b. Explain what happens to the magnitude and direction of the resultant field if the charge -Q is now placed at a distance 4r from point X. Show your working.

1 mark

Question 4 (3 marks)

A bundle of five 50 cm long wires are each carrying 2.0 A of DC current to the right in a uniform magnetic field of strength 9.0×10^{-2} T, as shown in Figure 3.

Figure 3

Calculate the magnitude of the magnetic force acting on the bundle of five wires carrying the current and determine the direction of the force.

Ν	direction

Question 5 (12 marks)

Figure 4 shows a schematic diagram for a simple DC motor. The coil is connected to a battery via a commutator and a switch.

a. When the switch is closed, explain whether the coil turns clockwise or anticlockwise as seen from the front of the motor (near the battery).

3 marks

b. Explain how the commutator works and therefore its importance.

c. State two simple ways in which the motor could be made to turn in the opposite direction. 2 marks

The DC motor has 500 turns of wire, the current is 400 mA and the magnetic field is 0.50 T. The length of JK is 0.20 m and the length of KL is 0.05 m.

d. Calculate the magnitude of the force acting on the JK arm of the DC motor for the position of the coil shown in Figure 4.2 marks

Ν

e. Calculate the magnitude of the force acting on the KL arm of the DC motor for the position shown in Figure 4.

2 marks

Ν

Question 6 (4 marks)

The linear accelerator SLAC can accelerate individual electrons to an energy of 8.0×10^{-9} J.

a. Determine the potential difference in V needed to achieve this energy. 2 marks

b. Determine the electric field strength in the chamber of the SLAC if it is 3.2 km long. 2 marks

 $V m^{-1}$

Question 7 (3 marks)

Figure 5 shows a magnetic component section of a synchrotron particle accelerator. The electron beam curves inwards as a result of the magnetic field as shown.

- **a.** On Figure 5, show the direction of the magnetic field where the electron beam is. 1 mark
- **b.** Explain how you arrived at your answer to part **a**.
